PROFILE SUMMARY

Software Engineer with 3 years of professional experience building scalable backend architectures using **Python (FastAPI, Flask)**. Skilled in designing RESTful APIs, optimizing complex database queries, and building and maintaining systems across the software development lifecycle. Proficient in **SQL/NoSQL databases**, **system design**, cloud-based deployments on **GCP**, and utilizing **LLM-based orchestration frameworks** (LangGraph, LangChain) for data-driven automation.

SKILLS

Programming Languages: Python, Java, Shell Scripting, SQL, C++

Backend & APIs: FastAPI, Flask, REST APIs, GraphQL, Microservices, AsyncIO, API Design, Distributed Systems

AI Integration & Frameworks: LangChain, LangGraph, RAG Pipelines, Agentic AI, Vector Databases (Pinecone)

Databases, Messaging & Frontend: PostgreSQL, MySQL, MongoDB, SQL Server, Redis, Kafka, Angular

Cloud & DevOps: GCP/Azure, Docker, Kubernetes, CI/CD, Linux, Git, HashiCorp Vault

WORK EXPERIENCE

CGI Inc., Bangalore

July 2023 – Present

Software Engineer

ETL Migration Platform

- Architected and developed scalable backend services using FastAPI, supporting ETL migration tasks and system integrations.
- Integrated LangGraph-based automation to dynamically generate and execute database pipeline configurations from metadata.
- Developed RESTful APIs for pipeline orchestration and data processing.
- Built backend systems with structured logging, tracing, and monitoring to improve reliability and debugging efficiency.
- Designed database schemas and optimized SQL queries using MySQL and SQL Server for efficient pipeline state management.
- Implemented metadata-driven configurations, reducing manual setup effort by 40% and saving the ETL team approximately 2 sprint points.
- Tech Stack:* Python, FastAPI, LangGraph, LangChain, MySQL, SQL Server, Git

DevOps & Systems Reliability

- Owned the full lifecycle of backend features, from initial design and development through deployment and production support.
- Maintained GCP services across development, staging, and production environments.
- Troubleshooted production issues, optimized performance, and ensured high availability of backend systems.
- Followed Git-based practices, including code reviews and branching strategies, to maintain code quality.
- Integrated HashiCorp Vault with GitLab CI to securely manage Teradata and Unix credentials.
- Automated the deployment process for ETL components using Docker and GitLab runners, saving support teams 50% of deployment time.
- Tech Stack:* GCP, Docker, Kubernetes, Redis, Kafka, Linux, CI/CD, GitLab

Internal Data Platform & Tooling

- Developed internal tools for synthetic data generation to support ETL pipelines and data preprocessing.
- Implemented schema-aware data generation pipelines to improve efficiency and reduce wait times for upstream test data by 20+ hours per week.
- Used LLM-based frameworks to enable intelligent data generation and processing use cases.
- Enabled data export in CSV and JSON formats for integration with downstream systems and direct testing.
- Tech Stack:* Python, Flask, Metadata Grounding, SQL, JSON/CSV Serialization

PROJECT WORK

GenAI Medical Assistant

June 2025

- Developed an AI assistant using FastAPI and Azure OpenAI for symptom-based reasoning and contextual responses.
- Implemented prompt grounding and retrieval strategies to reduce hallucinations and improve response accuracy.
- Tech Stack:* Python, FastAPI, Azure OpenAI, Angular, Azure Cloud

ShopNest - E-commerce Platform

September 2023

- Designed and developed RESTful microservices using Spring Boot, including authentication and product management modules.
- Implemented asynchronous communication between services using Kafka (producer-consumer pattern) to improve scalability and decouple components.
- Tech Stack:* Java, Spring Boot, Node.js, Angular, MySQL, Kafka, Docker

EDUCATION

National Institute of Technology, Jamshedpur

July 2019 – June 2023

B.Tech in Electrical Engineering

CGPA: 8.12/10

AWARDS AND CERTIFICATES

- Databricks Certified Generative AI Engineer:** Certified in production-grade Generative AI engineering, including Vector Search, Model Serving, MLflow, Unity Catalog, RAG systems, and LLM orchestration.
- Bronze Award (CGI):** Honored for automation initiatives optimizing metadata-driven ETL pipeline deployments and reducing manual operations by 50%.
- Top 10 Finalist (Envision Hackathon):** Placed in the top 10 out of 100+ competing teams within CGI's internal innovation framework for developing an AI-powered medical reasoning application.
